Gabriel Kosmacher

PhD Student, The University of Texas at Austin

kennykos.github.io ○○○ gkosmacher@utexas.edu ○○○ github.com/kennykos

Education

2023 – Present	PhD in Computational Science, Engineering, and Mathematics Oden Institute, University of Texas at Austin; Austin, TX Advisor: George Biros
2023 – 2026	MS in Computational Science, Engineering, and Mathematics Oden Institute, University of Texas at Austin; Austin, TX
2019 – 2023	BSLAS in Mathematics & Computer Science University of Illinois at Urbana-Champaign; Champaign, IL

Research Experience

2023 – Present	Graduate Research Assistant – **Efficient Numerical Simulations of Blood Flow** George Biros, Mechanical Engineering University of Texas at Austin
2025, August – 2025, October	Research Intern – **GPU Algorithms for Tensor Compression** Eric Phipps & Sivasankaran Rajamanickam Sandia National Laboratory

Awards

2026	IEEE Cluster Best Paper, *Winner*

Professional Activity

Undergraduate Mentees

2026, August – Present	Oliver Wu (UT Austin) Implementation of the 2D Dual-space Multilevel Kernel-splitting (DMK) method.
2026, January – 2026, May	Max Feldman (UT Austin) PyKokkos GPU kernels for randomized k-nearest neighbors.

Seminar Organization

2025 – 2026	Babuška Forum (UT Austin) Co-organized with Boyuan (John) Yao A seminar series started by Professor Ivo Babuška to expose graduate students to technical topics relevant to computational engineering and science.
2024 – 2025	CSEM Student Forum (UT Austin) Co-organized with Yuzhe (Jerry) Chen A seminar series given by current CSEM graduate students to their peers.

Software

ut-padas/parki	Project maintainer and lead contributor. Developed CPU/GPU Ewald summation algorithms for the Stokes and Laplace kernels in different periodic regimes.
kokkos/pykokkos	Project collaborator and top 10 contributor. Implemented functionality for mathematical special functions, automatic just-in-time (JIT) recompilation, CMake JIT compilation, building and installing on MacOS and AMD GPUs, documentation and continuous integration.
sandialabs/GenTen	Implemented a new matrix-free MTTKRP kernel for dense tensors: `MTTKRP_Dense_Perm_Kernel`, the basis for the publication *A Performance Portable Matrix Free Dense MTTKRP in GenTen*.
Engineering Software/pkdb	An interactive debugger for performance portable Python HPC kernels. Helped to develop benchmarks and examples, collaborated on architecture design and features.

Publications

An up-to-date list is available on Google Scholar:
